**DETAILED ACTION**

***Claim Objections***

Claim 2 is objected to because it lacks a period at the end of the end.

Appropriate correction is required.

***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 10/24/2006 has been entered.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 2872

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Sweatt et al. (US 2002/0105725 A1).

Regarding claims 1 and 6, Sweatt discloses a configurable diffractive optical lens (Fig. 9) comprising an array of diffractive sub-elements having a reflective surface (52's of Fig. 9), wherein each sub-element has a controllable position with a chosen range, and in which a number of sub-elements are provided with a reflective grating with a number of predetermined spectral characteristics (See paragraph [0071]).

Regarding claim 2, Sweatt discloses the physical size of the sub-element being provided with a diffractive grating is substantially larger than the spatial period ( $d_1$  of Fig. 9C) of the diffractive grating on said sub-element.

Regarding claims 3 and 5, Sweatt discloses the position of each sub-element being adjustable in a direction perpendicular to the element surface (see paragraphs [0071] and [0072]).

#### ***Allowable Subject Matter***

Claims 4 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in

Art Unit: 2872

independent form including all of the limitations of the base claim and any intervening claims.

Claim 4 is allowable over the prior art for at least the reason that the prior art fails to teach or reasonably suggest the position of each sub-element being adjustable in a direction parallel to the element surface (i.e. lateral) as set forth in the claimed combination.

Claim 7 is allowable over the prior art for at least the reason that the prior art fails to teach or reasonably suggest the array of sub-elements being a two-dimensional array as set forth in the claimed combination.
